

Justine Mhars Mumar

Software Developer & AI Automation Developer

Lapu-Lapu City, Cebu, PH • +63 929 616 1918 • justinemharsmumar@gmail.com • github.com/justinemhars123 • justinemharsmumar-portfolio.vercel.app

PROFESSIONAL SUMMARY

IT graduate graduating in June 2026 who loves building web applications and AI-powered tools. I enjoy solving real problems through code and am always looking for ways to bring AI into practical, everyday workflows. I learn fast, work well in a team, and take pride in writing clean code that gets the job done.

EXPERIENCE

IT Intern — Lifewood Data Technology

January – May 2026 (540 hrs)

- Built full-stack web applications, AI agents, and a 3D horror game, contributing to internal tools and workflows across multiple projects.
- Applied prompt engineering techniques to design and optimize AI-powered tools and automated workflows for company use.
- Curated and structured training datasets for AI development through web crawling and systematic data compilation.

EDUCATION

Bachelor of Science in Information Technology

2022 – 2026

University of Cebu Lapu-Lapu and Mandaue

Graduating June 2026

Dean's List Awardee — 3 Semesters

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Python, C#, Java, HTML, CSS, SQL

Frameworks & Libraries: Laravel, React.js, Tailwind CSS, Vite

Databases: MySQL, Supabase, Firestore

Tools & Platforms: Git, Unity, Figma, Vercel, EmailJS, Vitest

Soft Skills: Teamwork, Problem Solving, Adaptability, Resilience

PROJECTS

AccessLaw – An Accessible AI-Powered Legal Counsel for Public Attorneys and Low-Income Citizens in Lapu-Lapu City

Capstone Project | Role: Documentation & Database Management | github.com/FrancisDave123/AccessLaw2

- Authored system documentation including workflows, process diagrams, and technical specifications for an AI-powered legal assistance platform serving public attorneys and low-income citizens.
- Designed and wrote the database schema including tables for legal case data, user records, and AI-generated summaries.
- Mapped system and user workflows to guide the development team in building core platform features, accelerating the design-to-development handoff.
- Led testing and quality assurance rounds to validate functional and usability requirements across key user flows.

Technologies: Laravel · React.js · Tailwind CSS · Python · MySQL

Fullstack Web Development Project – Lifewood Data Technology (Internship)

Solo Project | github.com/justinemhars123/lifewood-web

- Developed an AI-powered applicant interview portal as a solo intern project at Lifewood Data Technology, handling the full process from UI/UX design to backend implementation.
- Built a clean and responsive interface that guides applicants through a structured interview experience and provides admins with tools to manage submissions.
- Developed backend functionalities including automated email invites, AI-driven interview sessions, and response scoring with a fallback evaluator for reliability.

Technologies: React · TypeScript · Vite · Supabase · Google Gemini API · EmailJS · Vercel · Vitest

LifeSights – AI-Assisted Spreadsheet Analytics Dashboard

Collaborative Project | Role: Frontend Development & UI/UX Design | github.com/darinjan13/daily-headcount-ai

- Designed the UI/UX of a spreadsheet analytics dashboard enabling teams to explore workforce and operational data through interactive charts, tables, and an AI data assistant.
- Created wireframes and mockups in Figma to define user flows and interface layouts for non-technical users working with spreadsheet data.
- Built frontend components and styling using React and Tailwind CSS to deliver a clean, consistent user interface across all dashboard views.
- Contributed to project documentation including system workflows and feature specifications to guide the development team.

Technologies: React · Firebase · Google Drive API · Firestore · Tailwind CSS · Recharts · Figma

The Last Ritual – Atmospheric Horror Game

Collaborative Project | Role: Game Developer | github.com/justinemhars123/The-Last-Ritual

- Designed and built the in-game environment and 3D assets to create an immersive atmospheric horror setting.
- Integrated in-game audio including spatial sound effects and horror cues to enhance player tension and immersion.
- Developed core game features and logic including enemy AI behavior, player interaction systems, and ritual mechanics.
- Implemented character animations and integrated animation controllers to bring the in-game characters to life.

Technologies: Unity · C# · NavMesh · Animator Controller · Visual Studio · Git

Personal Productivity Agent – AI-Powered Task & Automation Tool

Solo Project | github.com/justinemhars123/note-agent-prod

- Built an AI-powered productivity agent that transforms unstructured notes into prioritized to-do lists using Groq LLM, with automatic language detection to respond in the user's original language.
- Implemented four flexible output modes (Default, Simple, Meeting, Email) with customizable prompts, enabling users to format tasks for different workflows and contexts.
- Designed a dual AI provider architecture with Groq as primary and OpenAI as fallback, including rate-limit retry logic and error handling for reliable uptime.
- Developed task management features including priority scoring, deadline-aware scheduling, browser reminders, .ics calendar export, and shareable result links.

Technologies: Node.js · Express · Groq API · OpenAI · JavaScript · HTML5/CSS3
